### Highest Ranking Employee at the Facility Information

Name: Paul Lacasse  
Title: President  
Address: 141 Regina Street  
North Bay, ON  
P1A 1A1  
Phone Number: (705) 474-0410  
Fax Number: (705) 476-6790  
E-mail: [rahnmet@rahnmet.com](mailto:rahnmet@rahnmet.com)

### Toxic Substances that must be reported on

Substance 1: Copper (and its compounds)  
CAS Number: NA-06

### Facility Overview

Rahnmet manufactures and repairs rock crushers for the mining industry and is located in North Bay, ON. There are two facilities on-site; a non-ferrous foundry and a plant (machine shop). The foundry casts bronze wearing parts which are then machined in the plant. The plant also refurbishes crusher parts which involves welding parts and then machining them. Rahnmet is committed to keep detailed accounting records on all substances entering, leaving, created, and transformed in the facility. This report covers copper.

There has not been a change in the method or combination of methods used to track and quantify the substances. There were not any significant process changes at the facility and there were no incidents that affected the tracking of the substances.

Copper and its compounds - CAS Number: NA-06

	2019	2018	
<b>Mass Balance</b>	<b>Weight in tonnes</b>	<b>Weight in tonnes</b>	<b>% Change</b>
Entering process	>10 to 100	>10 to 100	-41.88%
Contained in finished product	>10 to 100	>10 to 100	-21.17%
Recycled	>1 to 10	>1 to 10	26.13%
Released to atmosphere	>0 to 1	>0 to 1	-40.01%

### Plan Objectives

All employees at Rahnmet are involved in the reduction of toxic substances. It is our goal to further reduce the creation and release of toxic substances where technically and economically feasible. Copper cannot be reduced since they are part of the finished product.

### Plan Implementation Progress

There are no feasible reduction options for copper. As a result, there are no plans and no timelines for reduction. Rahnmet is committed to maintaining the quality and effectiveness of the air filtration and capturing systems and continually looking at how to improve its effectiveness and thus reduce emissions to the atmosphere. A secondary dust collector was added in 2016, used to capture dust during non-combustion operations.

Certification by Highest Ranking Employee

As of June 3, 2020 I, Paul Lacasse, certify that I have read the 2019 toxic substances accounting report. I am familiar with its contents, and to the best of my knowledge the report is factually accurate and complies with the Toxics Reduction Act 2009 and Ontario Regulation 455/09 made under the Act.
